

# ***SELF ALIGNING ROTATORS***

CAPACITY FROM 3T TO 500T

**AMIN**  
AMIN MACHINERY PVT. LTD.

## Self-Aligning Rotators

- Instantly self-aligning to the workpiece.
  - Robust all-steel welded construction.
  - \* • Clutches incorporated in top rollers of Drive Section to prevent damage to transmission when loading.
  - Variable speed rotation through hydrostatic variator or thyristor control.
  - Tachometer speed indicator (optional).
  - Anti-Creep fitted to Idler Section (optional)
- \* **FOR SAR 600 & ONWARDS ONLY**

### Construction :

AMIN Self-Aligning Rotators provide an economical and practical answer to cylindrical vessel rotating problems.

The Unique design permits the rollers to align themselves to the workpiece without any manual pre-adjustment whatsoever and irrespective of ovality or irregularity. The vessel remains central to the frames irrespective of diameter, and frequent adjustment of the welding head becomes unnecessary.
